

## Mayan Math System – Vigesimal, Base 20 System

				
1	2	3	4	5
				
6	7	8	9	10
				
11	12	13	14	15
				
16	17	18	19	0

On the chart you see above. Each dot represents the number 1, each line represents the number 5. The shell represents a zero. Our math system is a Decimal or Base 10 system. We use place values based off of 10's and begin our place values horizontally with the lowest from right to left. The Mayans used a Vigesimal or Base 20 system. They arranged their place values vertically with the lowest from the bottom to the top.

### EXAMPLE

#### Our system...

1000's place (10 ) – 100's place (10 ) – 10's place (10 ) – 1's place (1 )

#### Mayan system...

8000's place (20 ), in this placement a dot = 8000 and a line = 40,000

400's place (20 ), in this placement a dot = 400 and a line = 2000

20's place (20 ), in this placement a dot = 20 and a line = 100

1's place (1 ), in this placement a dot = 1 and a line = 5

EXAMPLE OF TRANSLATION (It helps to use expanded notation.)

#### Our system...

9,999

$9 \times 1000 + 9 \times 100 + 9 \times 10 + 9 = 9,999$  OR  $9000 + 900 + 90 + 9 = 9,999$

#### Mayan system...

$9 \times 8000 + 9 \times 400 + 9 \times 20 + 9 = 75,789$  OR  $72,000 + 3600 + 180 + 9 = 75,789$

So the Mayan equivalent to our number 9,999 is 75,789.
