

**Mount Rushmore Project :**  
**Create 3 dimensional sculptures of a face using Air-Dry clay**

- I encouraged the students to try to sculpt a realistic face using their fingers, flat toothpicks, and wooden sucker sticks (purchased at Walmart, JoAnn's, Michael's...)
- I gave them images of president's faces, and a face proportion drawing to help guide them...
- within 2 days the sculpture will dry to a hard sculpture

- I pre-rolled the clay into balls about the size of a large egg (24 per 5lb. tub of Crayola clay) and stored them back into the tub or another sealed container separating layers with wax paper.

**The finished results!**
